Flu LAIV4††† Influenza	One or Two Doses Every Year†††			One Dose Every Year†††			

FOOTNOTES

HPV*

Two- or three-dose series are recommended depending on age at initial vaccination. Age 9-14 at initial vaccination is recommended a 2-dose series. Age 15 at initial vaccination is recommended a 3-dose series.

MenB**

Age 16-23 years (preferred age 16-18 years) not at increased risk should receive two or three doses based on shared clinical decision-making.

COVID-19†

Number of doses recommended depends on your child's age and type of COVID-19 vaccine used.

Flu IIV4††

Two doses given at least 4 weeks apart are recommended for children age 6 months-8 years. Age 9 years and older need one dose every year.

Flu LAIV4†††

Two doses given at least 4 weeks apart are recommended for children age 2 years-8 years. Age 9 years and older need one dose every year.

Additional Information

1. If your child misses a recommended vaccine for their age, talk to your child's doctor as soon as possible to see when the missed dose can be given.
2. If your child has any medical conditions that put them at risk for infection (e.g., sickle cell, HIV infection, cochlear implants) or is traveling outside the United States, talk to your child's doctor about additional vaccines that they may need.
